DETAILED ACTION

Claim Objections

1. Claim 2 is objected to because of the following informalities: In claim 2, in the second line from the bottom, "aperture" has incorrect spelling. Appropriate correction is required.
2. Claim 15 is objected to because of the following informalities: In claim 15, in the second line from the bottom, "placed" has incorrect spelling. Appropriate correction is required.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Singh (US_6,373,553 B1) in view of what is well-known in the art.
5. Claim 1 is rejected because:
 - A. Singh teaches of a method of imaging a patterned sample, the method comprising acquiring at least one image of the sample by illuminating the sample with substantially coherent light through an optical arrangement and collecting light reflected from the sample through said optical arrangement, wherein said optical arrangement has a predetermined numerical aperture NA and is located a predetermined distance from the sample, said predetermined distance being offset from a focal distance by an effective Talbot distance (see col.6, lines 29-48), the method thereby improving a smoothness of

Art Unit: 2877

the image of the sample, the effective Talbot distance being determined by the NA of the said optical arrangement

- B. However, Singh does not explicitly teach of multiplying the Talbot distance by a predetermined coefficient for improving smoothness of an image.
- C. Multiplying a variable by a coefficient, the coefficient being a correction factor is well known in the art.
- D. In view of what is well-known in the art, it would have been obvious to one of ordinary skill in the art at the time the invention was made to apply a coefficient/correction factor to a variable such as the Talbot distance for the purpose of improving the accuracy of the desired result, the Talbot distance in this case.

6. Claims 2-20 are rejected for the same reasons of rejection of claim 1 above and additionally because they are directed to adjusting the distance of the optical arrangement or adjusting the shape of the numerical aperture to obtain a desired result. It would have taken only routine experimentation to one of ordinary skill in the art to adjust the distance of the optical arrangement or adjust the shape of the numerical aperture to obtain a desired result.

Contact/Status Information

7. Several facts have been relied upon from the personal knowledge of the examiner about which the examiner took Official Notice in this office action. Applicant must seasonably challenge well known statements and statements based on personal knowledge when they are made. In re Selmi, 156 F.2d 96, 70 USPQ 197 (CCPA 1946); In re Fischer, 125 F.2d 725, 52 USPQ 473 (CCPA 1942). See also In re Boon, 439 F.2d 724, 169 USPQ 231 (CCPA 1971) (a challenge to the taking of judicial notice must contain adequate information or argument to

create on its face a reasonable doubt regarding the circumstances justifying the judicial notice). If applicant does not seasonably traverse the well-known statement during examination, then the object of the well known statement is taken to be admitted prior art. In re Chevenard, 139 F.2d 71, 60 USPQ 239 (CCPA 1943). A seasonable challenge constitutes a demand for evidence made as soon as practicable during prosecution. Thus, applicant is charged with rebutting the well-known statement in the **next reply** after the Office action in which the well known statement was made.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Roy M. Punnoose** whose telephone number is **571-272-2427**. The examiner can normally be reached on 9:00 AM - 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Gregory J. Toatley, Jr.** can be reached on **571-272-2800 ext.77**. The fax phone number for the organization where this application or proceeding is assigned is **571-273-8300**.
